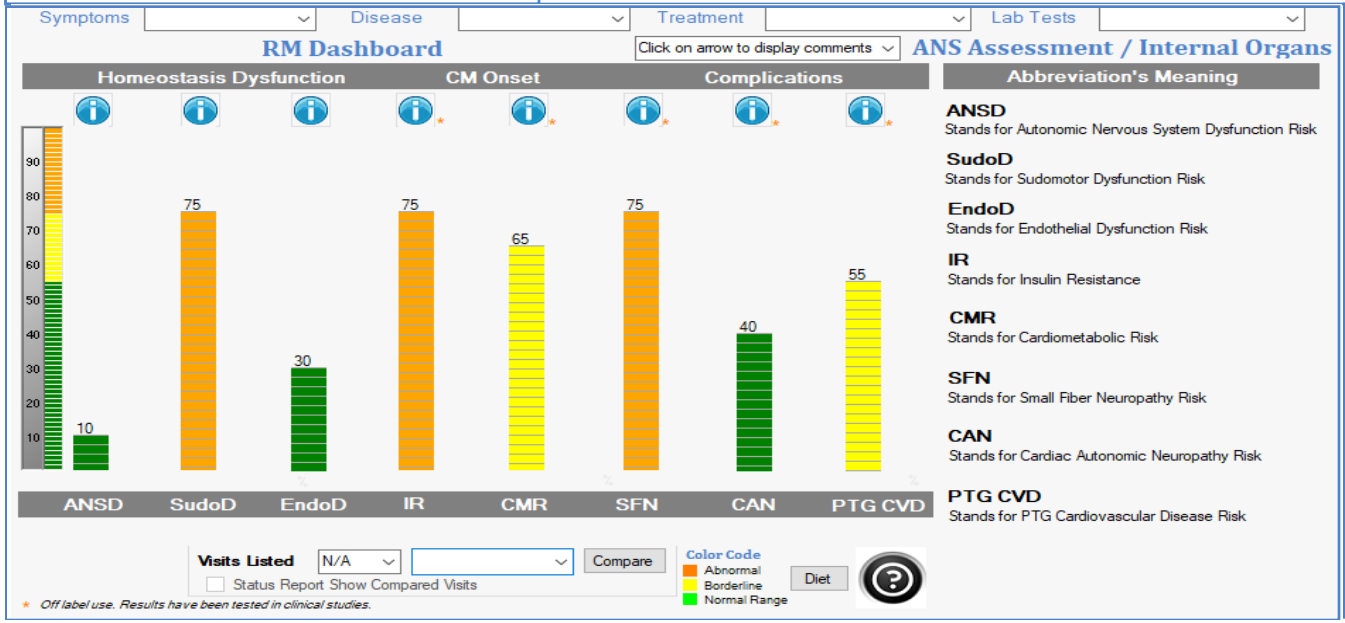
Clinical Context

Observations

Comments And Suggestions Of The Risk Analysis

ANSD:	No autonomic dysfunction detected.
SudoD:	Mild Microcirculation disorder
	Mildly reduced C-Fiber velocity
	Moderately decreased sweat gland function
EndoD:	The result is in normal range.
IR:	Moderate Abnormal result. Lifestyle change is suggested.
CMR:	Borderline result. Further lab tests (Fasting BG and OGTT) are suggested
SFN:	Moderate result. Further supplementary exams comprised in Toronto Clinical Neuropathy Score are suggested.
CAN:	The result is in normal range.
PTG CVD:	Mild endothelial and ANS dysfunction detected. Cardiometabolic Profile lab tests are suggested.



*Off label use. Results have been tested in clinical studies.

The correlations between 2h- OGTT Glucose and Cardiometabolic Risk score (CMRS) were: r = 0.56 (p = 0.003).

Small fiber neuropathy risk using the sudomotor response score had a sensitivity of 91.4 % and specificity of 79.1% to detect diabetic neuropathy symptoms score >=1.

PTG CVD is calculated from the PTG Spectral Analysis markers. Comparing group with CAD and control group, spectral Analysis Markers have a sensitivity of 84.6% and specificity of 96.8% to detect CAD. Off label use. Results have been tested in clinical studies.
